Test Item 2: Modular Dimensions

Test Method: EN 13964:2014 Section 4.2

Test Condition:

The plan dimension of suspended ceiling substructure and membrane components should be based on modular co-ordination as standardized in ISO 1006.

The commonly used modular dimensions of membrane components shall be based on  $n \times 100\text{mm}$  or on sub-modules of  $n \times 50\text{mm}$  or  $n \times 25\text{mm}$ .

If there is no separate product standard available, Table 2 of EN 13964:2014 applies.

Test Result:

Nominal size:  $600 \times 600\text{mm}$

Measured values:  $599.9 \times 599.9\text{mm}$

Conclusion: The plan dimension complied with ISO 1006

Test Item 3: Flexural Tensile Strength (No Load Type)

Test Method: EN 13964:2014 Clause 4.6.2 and Annex F

Test Condition:

The membrane shall have sufficient strength to support its own mass when installed in the substructure. When any additional load is to be applied, the load which may be applied shall be specified. In addition to the minimum requirement that the membrane shall not fall out, it shall be of adequate strength to ensure that safety in use is maintained. Relevant, adequate flexural tensile strength shall be determined, due account being taken of the span of the membrane component, any openings which may be made in it, and any load (in addition to its self weight) that may be attached to the membrane. Tests designed to assess the flexural tensile strength shall be performed according to Annex F, on representative samples of the membrane material, account also being taken of the end use design. The result of the test and the performance of the membrane shall be declared as one of the classes of exposure of Table 8 and the admissible type of load to be applied according to Table F.2.

Class	Temperature (°C)	Humidity (%RH)	Duration (h)
B	30 ± 2	90 ± 5	168 ± 1
C		95 ± 5	
D	Conditioning as specified by the manufacturer (in accordance with Table 8)		

Mount the test specimen in the test frame, which consists out of the grid that the product is intended to use with or in a test frame representative for the end use conditions and maintain for a duration of (600 ± 10)s.

At least 5 test samples shall be subjected to testing.

Failure of the test corresponds with collapse of the specimen or parts thereof.

All test samples shall pass the test. If 1 fails, 5 additional samples shall be subjected to testing and all subsequent samples shall meet the requirement.

minimum, the name of that substance in the Candidate List.

## Notification:

In accordance with Regulation (EC) No 1907/2006, any EU producer or importer of articles shall notify ECHA, in accordance with paragraph 4 of Article 7, if a substance meets the criteria in Article 57 and is identified in accordance with Article 59(1) of the Regulation, if (a) the substance in the Candidate List is present in those articles in quantities totaling over one tonne per producer or importer per year; and (b) the substance in the Candidate List is present in those articles above a concentration of 0.1% weight by weight (w/w).

SGS adopts the ruling of the Court of Justice of the European Union on the definition of an article under REACH unless indicated otherwise. Detail explanation is available at the following link:

## 2.2 Concerning material(s):

Test results in this report are based on the tested sample. This report refers to testing result of tested sample submitted as homogenous material(s). In case such material is being used to compose an article, the results indicated in this report may not represent SVHC concentration in such article. If this report refers to testing result of composite material group by equal weight proportion, the material in each composite test group may come from more than one article.

If the sample is a substance or mixture, and it directly exports to EU, client has the obligation to comply with the supply chain communication obligation under Article 31 of Regulation (EC) No. 1907/2006 and the conditions of Authorization of substance of very high concern included in the Annex XIV of the Regulation (EC) No. 1907/2006.

## 2.3 Concerning substance and preparation:

If a SVHC is found over 0.1% (w/w) and/or the specific concentration limit which is set in Regulation (EC) No 1272/2008 and its amendments, client is suggested to prepare a Safety Data Sheet (SDS) against the SVHC to comply with the supply chain communication obligation under Regulation (EC) No 1907/2006, in which:

- a substance that is classified as hazardous under the CLP Regulation (EC) No 1272/2008.
- a mixture that is classified as hazardous under the CLP Regulation (EC) No 1272/2008, when it contains a substance with concentration equal to, or greater than the classification limit as set in Regulation (EC) No. 1272/2008; or
- a mixture is not classified as hazardous under the CLP Regulation (EC) No 1272/2008, but contains either:

- (a) a substance posing human health or environmental hazards in an individual concentration
